Multiple approaches of inserting data to table

use jfs43;
select * from student;
truncate table student;

(approach no-1)

Adding all column data mandatory accordingly with table column order

insert into student values(1,"pavan","python"); insert into student values(2,"kalyan","sql");

(approach no-2)

Adding all column data mandatory accordingly with user-defined column order

insert into student(name,sl_no,course) values("bala",3,"java");

(approach no-2)

Adding column data only to user-required coulmns not all accordingly with user-defined column order

insert into student(name,course) values("ram","python");

(approach no-3)

Adding column data only to user-required coulmns not all accordingly with user-defined column order and multiple records at a single query

insert into student(sl_no,name,course) values(4,"rakul","python"),
(5,"tej","java"),(6,"varun","sql"),(7,"vaishnav","python");
insert into student values(8,"shankar","python"),
(9,"arjun","java"),(10,"ramu","java");

Select statement for required data only

select name from student;
select name, course from student;
select course,name,sl_no from student;
select name from student where sl_no%2=0;
