clauses in MySQL

precedence order of execution of clauses :

1) FROM
2) WHERE
3) GROUP BY
4) HAVING
5) SELECT
6) ORDER BY
7) LIMIT

Clause	Purpose
SELECT	Choose columns
FROM	Table name
WHERE	Filter rows
GROUP BY	Group data
HAVING	Filter groups
ORDER BY	Sort
LIMIT	Restrict rows
DISTINCT	Remove duplicates
JOIN	Combine tables

OFFSET is used to skip a number of rows before starting to return rows.

It is commonly used with LIMIT.

Order Type	NULL Position
ASC	--NULLS FIRST
DESC	--NULLS LAST

how nulls are treated in orderby clause:

```
SELECT *
FROM students
ORDER BY marks IS NULL, marks ASC;
```

Explanation:

marks IS NULL → NULL = 1, NOT NULL = 0

So NOT NULL rows come first

NULL rows go to the end

example :

```
SELECT * FROM students
ORDER BY marks IS NULL, marks ASC;
```

Output:

id	name	marks	
3	Ravi	70	
1	Ram	90	
2	Sita	NULL	
4	Gita	NULL	[is null is asc--> nulls last]
