Converting to sqlite:

```
 import sqlite3

connect_db = sqlite3.connect("ecom.db", check_same_thread=False)

cursr_pnt = connect_db.cursor()
```

user_data table in mysql:

```
create table user_data(sl_no int primary key auto_increment,
ac_no varchar(14) unique not null, u_name varchar(30) not null,
pin int not null, balance float(2) not null);
```

user_data table in sqlite:

```
CREATE TABLE user_data (
   sl_no INTEGER PRIMARY KEY AUTOINCREMENT,
   ac_no TEXT UNIQUE NOT NULL,
   u_name TEXT NOT NULL,
   pin INTEGER NOT NULL,
   balance REAL NOT NULL
);
```
